

LOCKERS

LOCKERS

LOCKERS

No longer just a functional solution for the modern office, we've developed and designed locker systems that will bring your workspace into the 21st century.

All of our storage systems can be personalised with durable, laminate-protected graphics that maximise opportunities for corporate branding or add a decorative element to any space.

Our range of locks and handles, from high tech, wireless solutions to traditional key operated locks, combines secure functionality with elegant design.

Whether you're looking for a solution that stands out or blends in, the James Tobias team can build it.

TRIM

Designed to maximise space in the most flexible way, Trim's free-standing units with recessed plinth detail create a clean, clutter-free profile.

Add a practically unlimited choice of finishes and colours, and you've got everything you need to create a truly bespoke space that is also infinitely practical.

ARIA

Practical and beautiful,
you'll love Aria's clean lines
and space-saving features.

The aluminium system gives long-lasting structural integrity while the full-height design offers an appearance that can be tailored to suit your business style or brand.

And it can all be fully integrated into existing runs of James Tobias StorageWall.

Z LOCKER

This hybrid system can be fully integrated into all James Tobias systems to create a complete storage solution that is also streamlined and stylish.

We can tailor the solution to accommodate hanging garments and wider items, all while using the minimum amount of floor space.

The all-timber internal construction offers sustainable quality, flexible hinge positioning and adjustment.
