

BUZZLOCKER

Smart and secure storage solutions, built for sharing.

The BuzzLocker is a cutting edge storage solution that combines James Tobias' high quality and bespoke storage with Bencode's innovative security systems.

Whenever and wherever your customers or employees may need to store and exchange documents, materials or personal belongings, BuzzLocker takes care of everything for you. The intelligent TANmode technology securely hosts user data and generates random locking codes that it deploys to the end user via SMS or email, allowing them direct access when they need it and where. Because it is hosted in the cloud and operated entirely offline, data cannot be manipulated via the internet, maximising both ease of access and security.

Bespoke

We can build a complete solution, from the technology to the style of locker through to the unique finish, tailoring every element to your specific needs.

Wireless

No hassle installation as the BuzzLocker is completely wireless, removing the need for a complicated IT system behind it to work.

Long life battery

A powerful battery provides over 10,000 hours of constant use and allows you to place your BuzzLockers wherever you wish, free from the need of an electricity source.

Offline operation

Operating offline with all data hosted securely in the cloud makes the BuzzLocker immune to hacking and manipulation.

Reporting

Quick access reports allow you to monitor use of your BuzzLockers.

Simple to use

The BuzzLocker is simple for both you and your users. Keyless operation through a unique code and keypad interface removes the need to monitor and replace lost keys.

Securely stored data

The TANmode technology stores all user data safely in the cloud so you don't have to and allows users to use your BuzzLockers again and again without re-registering.

TANmode technology

Innovative technology cuts out the middle man through automatic key code generation and distribution to the end user, meaning you don't have to.

Multiple applications

The BuzzLocker is a versatile solution with the ability to be used for multiple purposes and in numerous environments.

The BuzzLocker is suitable for a number of environments and can be configured with two systems depending on the desired application.

Secure Item Exchange Solutions

The BuzzLocker, programmed for secure item exchange, is the perfect solution for any environment where belongings, packages or documents need to be securely passed from one person to another without the need for them to be in the same place at the same time. The smart TANmode software automatically generates a unique access code that it deploys via email or SMS to the desired recipient of the item, giving them access to a defined BuzzLocker at a given time or day.

This simple and streamlined process makes the BuzzLocker for secure item exchange a hugely versatile system. Most perfectly partnered with corporate environments, employers can offer the BuzzLocker as a secure space for their employees to share tools, documents and more across a business. It can also be used as a co-ordinated system for the drop off and collection of post and parcels.

Rentable Storage Solutions

The BuzzLocker, programmed for rentable storage, is designed for environments where secure storage is offered to customers for a fee. It is best suited for situations where a user may need to store items or luggage for a short period of time (however the length of time a user can access the locker for is dependent entirely on how long they want to), such as at transport stations, hotels, hostels and more. The BuzzLocker is also a great way for monetising your storage and earning you money by utilising your unused space. We even offer a number of financing options to make using the BuzzLocker in this way as simple and affordable as possible.

The self-managing TANmode system utilises QR technology to allow users to choose their BuzzLocker, how long they need to use it and pay for it via PayPal, credit card or phone bill. Users only need to register once and can manage their account simply online. An operator can also manage the BuzzLocker system online to keep track of usage, billing and refunds of excess rental fees.

The Lockers Themselves

Our locker solutions are practical and functional, but they're also 'stand out' in terms of quality and style. The BuzzLocker can be built bespoke for your space around your specific requirements so you can choose from any of our locker styles with infinite opportunities to tailor the finish.
