

BuzzLocker: Secure Item Exchange Solutions

Smart and secure storage solutions, built for sharing.

The BuzzLocker is a cutting edge storage solution that combines James Tobias' high quality and bespoke storage with Bencode's innovative security systems.

The BuzzLocker, programmed for secure item exchange, is the perfect solution for any environment where belongings, packages or documents need to be securely passed from one person to another without the need for them to be in the same place at the same time. The smart TANmode software automatically generates a unique access code that it deploys via email or SMS to the desired recipient of the item, giving them access to a defined BuzzLocker at a given time or day. Because it is hosted in the cloud and operated entirely offline, data cannot be manipulated via the internet, maximising both ease of access and security.

This simple and streamlined process makes the BuzzLocker for secure item exchange a hugely versatile system. Most perfectly partnered with corporate environments, employers can offer the BuzzLocker as a secure space for their employees to share tools, documents and more across a business. It can also be used as a co-ordinated system for the drop off and collection of post and parcels.

Bespoke

We can build a complete solution, from the technology to the style of locker through to the unique finish, tailoring every element to your specific needs.

Offline operation

Operating offline with all data hosted securely in the cloud makes the BuzzLocker immune to hacking and manipulation.

Wireless

No hassle installation as the BuzzLocker is completely wireless, removing the need for a complicated IT system behind it to work.

Simple to use

The BuzzLocker is simple for both you and your users. Keyless operation through a unique code and keypad interface removes the need to monitor and replace lost keys.

Long life battery

A powerful battery provides over 10,000 hours of constant use and allows you to place your BuzzLockers wherever you wish, free from the need of an electricity source.

TANmode technology

Innovative technology cuts out the middle man through automatic key code generation and distribution to the end user, meaning you don't have to.

Reporting

Quick access reports allow you to monitor use of your BuzzLockers.

Securely stored data

The TANmode technology stores all user data safely in the cloud so you don't have to and allows users to use your BuzzLockers again and again without re-registering.

Multiple applications

The BuzzLocker is a versatile solution with the ability to be used for multiple purposes and in numerous environments.

HOW IT WORKS

THE SYSTEM ADMIN PLACES AN ITEM IN A BUZZLOCKER AND ASSIGNS IT TO A RECIPIENT

THE BUZZLOCKER AUTOMATICALLY SENDS A SECURE ACCESS CODE TO THE RECIPIENT VIA SMS OR EMAIL.

THE RECIPIENT CAN THEN ACCESS THE BUZZLOCKER USING THE SECURE ACCESS CODE TO RETRIEVE THE ITEM

The Lockers Themselves

Our locker solutions are practical and functional, but they're also 'stand out' in terms of quality and style. The BuzzLocker can be built bespoke for your space around your specific requirements so you can choose from any of our locker styles with infinite opportunities to tailor the finish.
